## **DETAILED ACTION**

### ***Election/Restrictions***

Applicant's election with traverse of the restriction in the reply filed on 05-02-05 is acknowledged. The traversal is on the ground(s) that claims 1, 7, 11 and 18 are generic or sub-generic with respect to the species represented by embodiments 1-2. This is found persuasive. In order to expedite prosecution, in view of applicant's response, claims 12-13 are rejoined with 1-11 and 14-19. The restriction is withdrawn.

### ***Double Patenting***

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1-19 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-10 of U.S. Patent No. 6,859,036 in view of Morita et al. [US 2005/0083059] disclose everything claimed except the support structure and/or bobbin being formed of a material having a magnetic permeability in the range of 1.000 to 1.002.

Morita discloses a support structure (bobbin) having a relative magnetic permeability of a value close to 1.000 [paragraph 47].

It would have been obvious to one of ordinary skill in the art at the time the invention was made to use a material having a magnetic permeability close to 1.000 for the support structure and/or bobbin of 6,859,036, as suggested by Morita et al., in order to ensure a homogeneous magnetic field.
